ADVANTAGES OF CARBON FIBER

Carbon fiber is not a metal wire resistance heating in the traditional sense, but infrared light wave heating. The carbon fiber material is similar to hair without any metal properties.

carbon fiber heating wire

PTC heating wire

- 1.Economy. It saves more than 50% electricity than traditional electric blankets. Break the traditional electric heating wire in the past, use carbon fiber heating wire, no electromagnetic wave radiation. Carbon fiber has large thermal conductivity, small thermal inertia, and high electrothermal conversion rate, so the rated power of carbon fiber far-infrared electric blankets of the same size is lower than that of ordinary electric blankets.
- 2.Environmental protection. Can make indoor air fresh, deodorizing and sterilizing functions. It can be used in spring, summer and autumn to remove moisture and make bedding dry; it can prevent moisture and water, prevent heat loss, and eliminate electric and magnetic fields at the same time, maximizing product safety and reliability. It is a new type of heating material that is healthy and environmentally friendly.
- 3.Healthy. The far-infrared radiation rate is 91.3%, which promotes human metabolism and local blood circulation, adjusts human body functions, and effectively relieves pain, numbness, insomnia, morning stiffness and other symptoms caused by arthralgia such as rheumatoid arthritis, lumbar muscle strain, and frozen shoulder. It has a certain auxiliary physical therapy and health care function for lumbar disc herniation, constipation, chronic gastritis, dysmenorrhea, neurasthenia, and bronchitis.
- 4.Stability. The heating element is composed of heating fibers with flame retardant properties.
- 5.Comfort. Using softer and thicker fabrics, it feels hot and soft without burning, and there will be no adverse reactions such as dry mouth, fire, dry skin, and insomnia after long-term use.
- 6.Durable. Far-infrared carbon fiber is a fibrous organic polymer material, so it has superior physical and chemical properties such as bending resistance and oxidation resistance. Under normal use, its continuous service life can be as high as 30,000 hours.
7. Wide range of applications. Health products that can be used by the elderly and children.
